# MEDICAL IMAGE COMPUTING MSc

Medical image computing applies computing technology to medical images for improved patient diagnosis, treatment and the understanding of disease. This MSc provides a rigorous background in medical imaging coupled with state-of-the-art medical image analysis.

Extracting quantitative data and monitoring changes from medical images is key to improving diagnosis, to providing treatment and surgery planning and in the follow-up of therapy. Increasingly imaging is seen as vital to drug development where the aim is to make drugs available faster and at a cheaper price.

This MSc programme is provided by the UCL Centre for Medical Image Computing – a large interdisciplinary grouping of eminent researchers. Lecturers are drawn from both the centre and other areas of UCL such as the Division of Biosciences. The centre and its clinical colleagues provide research projects that make up one third of the programme. UCL is ranked one of the top 10 global universities (*Times Higher Education* – QS World University Rankings 2008).

Previous MSc participants have come from a range of backgrounds including computer science, internet engineering, biomedical engineering, signal processing, natural sciences, physics, imaging and photography, hospital-based medical physics and medicine.

The programme equips students with skills necessary to participate effectively in a research, industrial or healthcare environment. Students have gone on to work for medical imaging companies, to train in radiology and to enrol for PhDs and other graduate training.

**OPEN DAY: See our website for open day dates: [www.ucl.ac.uk/mic](http://www.ucl.ac.uk/mic)**

## Programme structure

Taken full-time, the programme lasts one year. Students take eight taught modules in the first two terms (listed below) and a research project during the third term and summer. The syllabus is summarised below with more details available from the programme website at [www.ucl.ac.uk/mic](http://www.ucl.ac.uk/mic)

<b>1: Foundations of Anatomy and Scientific Computing</b> <ul style="list-style-type: none"> <li>• Anatomy and physiology lectures</li> <li>• Dissecting room practicals</li> <li>• MATLAB, linear algebra</li> <li>• Fourier, signal processing</li> <li>• Eigenvalues, SVD</li> <li>• Radiological coordinate systems</li> <li>• Geometrical transformations, DICOM</li> <li>• Optimisation</li> </ul>	<b>2: Computer Assisted Radiology</b> <ul style="list-style-type: none"> <li>• Computers in radiology</li> <li>• Risk assessment</li> <li>• Computer aided diagnosis</li> <li>• Abnormality detection</li> <li>• Content-based image retrieval</li> <li>• Bayesian networks</li> <li>• Machine learning</li> <li>• Decision support systems</li> <li>• Semantic web, ontologies, Protege</li> </ul>	<b>3: Physics for Imaging and Therapy</b> <ul style="list-style-type: none"> <li>• Interactions</li> <li>• Detectors</li> <li>• Sources</li> <li>• Dosimetry</li> <li>• Introduction to MRI</li> <li>• Introduction to nuclear medicine</li> <li>• Radiation protection</li> <li>• Statistics</li> </ul>	<b>4: Image Processing</b> <ul style="list-style-type: none"> <li>• Digital images</li> <li>• Segmentation</li> <li>• Image transformations, grey-level and geometrical</li> <li>• Morphological operations</li> <li>• Image filtering</li> <li>• Edge and corner detection</li> <li>• Colour</li> <li>• Template matching</li> </ul>
<b>5 and 6: Medical Imaging (Ionising) and Medical Imaging (Non-Ionising)</b> <ul style="list-style-type: none"> <li>• Diagnostic radiology</li> <li>• Computer tomography (CT)</li> <li>• Nuclear medicine</li> <li>• Positron emission tomography (PET)</li> <li>• Image reconstruction</li> <li>• MRI</li> <li>• Ultrasound,</li> <li>• Optical imaging</li> </ul>	<b>7: Information Processing in Medical Imaging</b> <ul style="list-style-type: none"> <li>• Medical image computing: diagnosis, therapy, understanding, statistics, clinical trials</li> <li>• Image registration</li> <li>• Image segmentation and classification</li> <li>• Statistical parametric mapping (SPM)</li> <li>• Insight toolkit (ITK)</li> <li>• High performance computing, cluster computing, graphics cards (GPUs)</li> </ul>	<b>8: Image Directed Analysis and Therapy</b> <ul style="list-style-type: none"> <li>• Image guided interventions</li> <li>• Dynamic measures from PET imaging</li> <li>• Dynamic measures from DCE-MRI</li> <li>• Visualisation (surface and volume rendering, applications e.g. virtual endoscopy)</li> <li>• Imaging biomarkers,</li> <li>• MRI diffusion tensor imaging and tractography</li> </ul>	<b>Research Project (counts for 30% of total marks)</b> <p>Examples of research projects have included:</p> <ul style="list-style-type: none"> <li>• Water/fat imaging in MRI</li> <li>• MRI artefact correction</li> <li>• Analysis of Alzheimer's images</li> <li>• Mammographic image analysis</li> <li>• Vessel-based image registration</li> <li>• Integration of fluoroscopy and interventional MRI</li> </ul>

### Transferable skills

The computing and mathematical techniques used in the programme are common to many areas of scientific work and research. Student assessment includes MATLAB and C++ based coursework, essays and an oral presentation based on analysis of scientific literature, conventional examinations, oral and poster presentations of research work and a written dissertation. The technical, organisational and presentation skills are widely applicable to future work in research, industrial or clinical environments.

## Find out more

### Entry requirements, fees and funding

The minimum entry qualification is a second-class Honours UK degree, or its overseas equivalent. There is also an English language proficiency requirement for those whose first language is not English. Medically qualified applicants will be considered provided they have a strong interest in computing, physics and mathematics. Applications are accepted throughout the year but we recommend submitting no later than the end of July for entry in late September.

### A limited number of EPSRC-funded studentships are available to eligible students.

Further information on the application process, fees, funding and dates can be found on the programme website at [www.ucl.ac.uk/mic](http://www.ucl.ac.uk/mic)

The Centre for Medical Image Computing (CMIC) sits within the UCL departments of Computer Science (CS) and Medical Physics and Bioengineering (MPB). Teaching staff include:

Dr David Atkinson (CMIC)

Dr Paul Beard (MPB)

Dr Matt Clarkson (CMIC)

Dr Gabriel Brostow (CS)

Dr David Collins (Institute of Cancer Research)

Dr Martin Fry (MPB)

Dr Adam Gibson (MPB)

Dr Jenny Griffiths (MPB)

Professor David Hawkes (CMIC)

Professor Jem Hebden (MPB)

Professor Derek Hill (IXICO)

Dr Kelvin Leung (CMIC)

Dr Andrew Melbourne (CMIC)

Marc Modat (CMIC)

Professor Kensaku Mori (Nagoya University)

Professor Roger Ordidge (MPB)

Dr Sebastien Ourselin (CMIC)

Ged Ridgway (CMIC)

Dr Gary Royle (MPB)

Professor Robert Speller (MPB)

Dr Paul Taylor (CHIME)

Professor Andrew Todd-Pokropek (CMIC)

Professor David Tracey (UCL Division of Biosciences)
