

Genes Jump Silicon Barrier

- Human Genome (rev 133) used to design HG-U133 +2 microarray
- Highly expressed “human gene” found
- “gene” looked up. Most similar not primate, not mammal, not even animal but mold.
- Mycoplasma contaminates biomolecular labs
- Gene is not human but mycoplasma mold.
- Mycoplasma contaminates GenBank
- Second example found. How many more?
