Software Development Engineer

2013-14 Placement

Stanhope-Seta design and manufacture petroleum test equipment and quality control instruments used to measure the physical characteristics that determine product quality and consistency. The test instruments are used by many diverse industries including oil, petrochemical, pharmaceutical, food, cosmetics, plastics and transport

A vacancy now exists for a software development engineer who will be working within the Research and Development team on a series of Microsoft Windows and Linux application projects. There will also be an opportunity to work with other technologies such as embedded systems.

Core knowledge required

- Windows programming techniques

- C, C++ and Visual Basic

- RS232, and USB protocols

- Windows XP, 7

The company also uses the QT Cross platform application development system and training will be given in this technology.

The role will be based at the Chertsey (Surrey) facility.

If you are interested in the role please contact Giles Verity – details below.

E-Mail is the preferred method and you should enclose a CV
